

TELEWELD

T2Z

Model	
Car Style	Full Size
Canopy	Yes
Style of Burners	Diesel
No. of Burners	20
Vibrators	Dual with float
Vaporizer	No
Speed	18 MPH
Engine	80-140 HP
Fuel	Diesel

Description: For those situations where safety considerations or fuel availability render the use of propane undesirable for heating continuous welded rail (CWR), Telweld can now provide an alternative. The Series ID CWR Heater Car features clean and efficient burners using pressure injected, #2 diesel fuel and blower impelled, combustion air. A short flame projection, and side shields that confine the heat output close to the rail, maximize the transfer of heat to the rail while minimizing the possibility of igniting ties or other flammable materials in the road bed.
